

Dominik Skokowski, Kościuszko Institute, Poland
"Strategic Approach to Cybersecurity"

Cyberspace is a new dimension, in which all sectors - military, government, academia, business and industry - have to adapt to and function in. This creates great opportunities as well as great dangers. It is extremely important to approach this uncharted territory with a sound cybersecurity strategy. Technological solutions alone are not enough if decisionmakers don't see its merits and understand the big picture. The Kościuszko Institute creates a platform of opinion exchange between Academia, Business and Public Sector, identifies their needs and ensures clear communication between them. Above all, The Kosciuszko Institute promotes strategic approach to cybersecurity.

Dominik Skokowski - Director of Partnerships at the Kosciuszko Institute - Responsible for building and maintaining relationships with business sector and academia. He has been involved in the Kosciuszko Institute's projects spanning Energy & Climate as well as Cybersecurity research areas and involving local, national and international community. He has taken part in application and realization of many grant projects in Poland and EU.
